

# AIMS for Microsoft BizTalk

Release the potential of your **Microsoft BizTalk** investments and resources.

AIMS for BizTalk is designed to disrupt how you support, operate, and monitor your BizTalk environment. It offers proactive, insightful, and relevant alerts that allow you to improve productivity, increase system availability, and gain critical business insight.

## Improve Productivity

You have selected Microsoft BizTalk to automate processes and provide a competitive advantage. Don't lose this advantage by wasting time and resources on antiquated monitoring solutions that force you to configure, adjust, and re-adjust thresholds and monitoring parameters – giving you either too many or too few alerts. AIMS for BizTalk allows you to reduce the time spent on monitoring and support, while dramatically improving the relevance of alerts you receive.

## Increase System Availability

AIMS for BizTalk learns, self-populates and is updated in real time. The automated, proactive alerts predict system problems from deviations in expected behavior, and let you take preventive action to prevent system downtime. Because the live topological map identifies where issues will happen, you can act faster, remain in control of your BizTalk environment, and ensure the health of your system.

## Gain Critical Business Insight

AIMS for BizTalk offers business insight by reporting on issues that are specific to relevant business processes or particular stakeholders. These reports allow you to analyze data in real time, forecast potential issues related to critical business processes, and take action. The reporting gives useful information to non-technical staff and provides business transparency of BizTalk performance.

## Proactive and Relevant Alerts in Just Minutes

AIMS for BizTalk prevents costly downtime and performance issues through the automated traffic and performance monitoring of all your BizTalk processes and components. Unlike other Microsoft BizTalk server monitoring tools, AIMS for BizTalk alerts you before a serious problem arises, identifying the exact location needing attention, and sends a real-time alert to relevant IT team members. What's more, AIMS for BizTalk self-optimizes, meaning the software learns your system's normal behavior and modifies the thresholds for alerts dynamically, based on your business process cyclicity, and becomes more sensitive to potential problems that lead to downtime.

### AIMS for BizTalk is delivered in the following editions:

Client On-premise	Client Azure	Service Provider
<p>The estimated install time is two hours, plus five minutes per agent deployed to each BizTalk monitored.</p>	<p>AIMS for BizTalk is hosted in Azure by AIMS Innovation. The client only needs to install the agent(s) on their BizTalk Servers. Estimated install time per server is five minutes.</p>	<p>A scalable solution hosted by AIMS Innovation in Azure gives a hosting/ service-provider the ability to monitor multiple remote/on-premise BizTalk environments using the same application and interface.</p>

---

“We are very pleased with AIMS for BizTalk. The tool was exactly what we were looking for to manage our BizTalk environment. The self-learning capability was very useful and the dynamic thresholds provide alerts that are relevant to our business.”

- Jo Hetland, Chief Operating Officer, Aon Norway 

---

## AIMS Delivers:

### Proactive Alerts

Discover a problem before it's really a problem. Real-time alerts based on patent protected technology are sent to relevant IT team members before there's any reason to panic.

### ◀ Real-Time Visualization

A user-friendly dynamic map points out exactly where to focus your attention. AIMS for BizTalk provides insight into the behavior of your BizTalk environment in a graphical easy-to-understand visual map of BizTalk.

### Application Discovery

AIMS for BizTalk discovers all servers, hosts, groups, ports and orchestrations automatically as well as the related business processes.

### Turn-Key Implementation

After a couple of hours of install, AIMS for BizTalk will do the rest, learning the normal behavior and dynamically setting thresholds for all components and parameters.

### Dynamic Thresholds

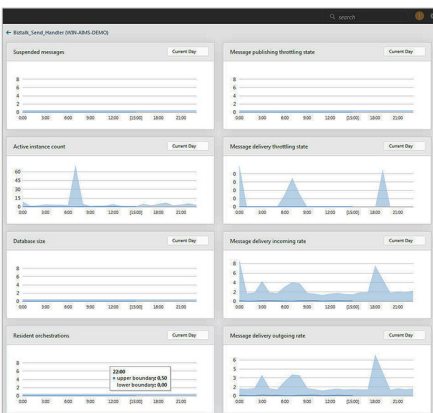

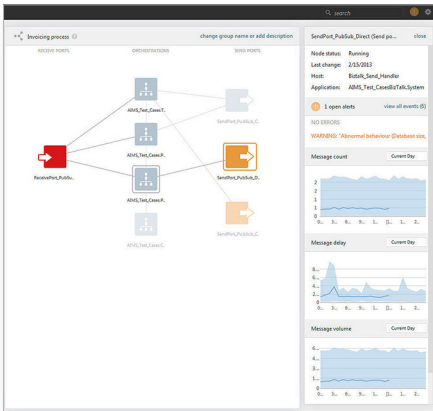

AIMS for BizTalk learns your business process cyclicity and behavior and uses this information to create sensitive, accurate alerts by setting dynamic thresholds in real time.

### Comprehensive Monitoring

AIMS for BizTalk monitors all your components and parameters, all the time. There is no need to select parameters, change monitoring configurations, or make changes after implementation.

### ◀ Business Insights & Reporting

Powered by our self-learning capability, AIMS for BizTalk recognizes and generates insightful reports that enable you, your peers and your managers to understand how BizTalk supports your separate business processes. The reporting and insight empowers you to move BizTalk performance from an IT initiative to a strategic imperative.

## About AIMS

AIMS Innovation is a technology software company that helps businesses release the potential of their Microsoft BizTalk investments and resources. AIMS software delivers enterprise solutions based on advanced patent-pending technology for pattern recognition, enabling proactivity for our customers. AIMS Innovation has offices in the United States, United Kingdom, and Norway.
